SWENET Software Infrastructure - User Questionnaire

What SWENET functionalities do you find more useful (1: less useful 5: very useful)?

Topics	less useful		↔	very useful	
	1	2	3	4	5
SWENET Services/SDAs					
The possibility to search for services and data					
Detailed descriptions of the SDAs and the services developed					
An overview of the latest data from SDAs integrated in SWENET					
Space Weather database					
The capability to browse and plot the data through a step-by step web interface					
Tools for binning and analysis of GOES footpoints and >2 MeV e-flux					
FTP mirror of the unprocessed data					
Overview of the latest space weather indices					
Overview of the latest plots from SEC					
Data dissemination via email					
Obtain daily reports related to space weather conditions					
Customised data mails					
Automatic alerts					

Which of the following functionalities would you find more useful for future SWENET upgrades?					
Implementation of tools for the statistical comparison of index nowcast & forecast					
Improve graphic and plotting tools (e.g. advanced 3-D plotting)					
Inclusion of historical space weather data					
Provision of data interface for display of 1second resolution data in real time					

Please, suggest us any functionalities you would be interested in for a future SWENET upgrade
